

Missouri Weekly Influenza Report 2007-2008 Season¹

Missouri is reporting “Widespread” to the CDC for Week 9².

To view influenza maps click [here](#). Each map will give county data by placing the cursor over the county.

Table 1. Reported Laboratory cases by sub-type for the Week ending March 1, 2008 (Week 9)

Serogroups	A (non-typed)	A (H1)	A (H1N1)	A (H3)	B	A or B Untyped (rapid test)	Total
Week 9	1,089			6	335	320	1,750

1,744 cases by rapid non-culture diagnostic test, 6 culture confirmed type A (H3) have been reported for week 9.

**Table 2. Influenza Season-to-Date and 5-season Median by Influenza Type
Through Week Ending March 1, 2008 (Week 9)**

Influenza Type	2007-08 Season	5-Season Median	Percent Change from 5-Season Median
Influenza A	13,164	5,978	120.2%
Influenza B	2,401	588	308.5%
Influenza Unknown Or Untyped	4,543	2,213	105.3%
Total	20,108	8,593	134.0%

**Table 3. Influenza Season-to-Date and
5-season Median by Age Group
Through Week Ending March 1, 2008 (Week 9)**

Age Group	2007-08 Count	5-Season Median	Percent Change from 5-Season Median
00-<02	2,021	1,085	86.3%
02-04	2,286	1,060	115.7%
05-14	4,009	2,431	64.9%
15-24	3,113	954	226.3%
25-49	5,303	1,496	254.5%
50-64	1,615	584	176.5%
65+	1,761	968	82.0%
Total	20,108	8,593	134.0%

**Table 4. Influenza Season-to-Date and
5-season Median by Region
Through Week Ending March 1, 2008 (Week 9)**

Region	2007-08 Count	5-Season Median	Percent Change from 5-Season Median
CE	3,111	1,306	138.2%
EA	8,358	2,398	248.5%
NW	4,096	3,316	23.6%
SE	1,523	545	179.4%
SW	3,019	1,781	69.5%
Total	20,108	8,593	134.0%

**Table 5. Deaths involving Pneumonia and Influenza (P&I)
Reported During the Week Ending February 23, 2008 (Week 8)***

Week 8	Season-to-Date	Week 8 Last Season	5 Year Weekly Median
48	1,447	92	92

* Beginning in Week 35 of 2003, the number of P&I deaths became based on a new system of retrieval that now includes all contributing causes of death from death certificates.

**Graph 1. Influenza 2007-08 Season-To-Date as compared to the previous 4 influenza seasons
Through the Week Ending March 1, 2008 (Week 9)**

**Table 6. Respiratory Specimens Submitted to SPHL for Viral Testing
Through the Week Ending March 1, 2008 (Week 9)***

	Positive Influenza	Total Number Specimens Submitted
Week 9	6	27
Season-to-Date	53	161

*Number positives also represent past weeks specimens submitted.

**Table 7. U.S. Influenza Sentinel Physicians Surveillance Network (USISPSN)*
Influenza-like Illness (ILI) for the Week Ending February 23, 2008 (Week 8)**

Age 0-4	Age 5-24	Age 25-64	Age 65+	Total ILI Patients Seen	Total Patients Seen	Percent ILI**
14	16	28	2	60	1661	3.61

*To learn about USISPSN, view the following website: <http://www.cdc.gov/flu/weekly/fluactivity.htm>

**This is above the regional baseline percent of 1.5%

**Graph 2. Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE)*
Weekly percent of ER visits with the chief complaint of Influenza-like Illness, from participating hospitals.
Through the Week Ending March 1, 2008 (Week 9)**

*To learn more about ESSENCE, view the following website: <http://www.dhss.mo.gov/ESSENCE/>

Antigenic Characterization of Missouri Influenza Isolates submitted to CDC by the State Public Health Laboratory: CDC antigenically characterizes a sample of positive Missouri influenza isolates, submitted through the Missouri Department of Health and Senior Services (DHSS), State Public Health Laboratory (SPHL). DHSS has submitted sixteen influenza isolates this season to CDC for antigenic characterization.

Results Received from CDC: Influenza B viruses currently circulating can be divided into two antigenically and genetically distinct lineages represented by **B/Yamagata/16/88** and **B/Victoria/2/87** viruses.

CDC has antigenically characterized two isolates this season from Missouri: B/FLORIDA/04/2006-LIKE virus and A/WISCONSIN/67/2005-LIKE (H3N2) LOW.

Both LAIV and TIV contain strains of influenza viruses that are antigenically equivalent to the annually recommended strains: one influenza A (H3N2) virus, one influenza A (H1N1) virus, and one influenza B virus. Each year, one or more virus strains might be changed on the basis of global surveillance for influenza viruses and the emergence and spread of new strains. Only the H1N1 strain was changed for the recommended vaccine for the 2007–08 influenza season, compared with the 2006–07 season. Viruses for both types of currently licensed vaccines are grown in eggs. Both vaccines are administered annually to provide optimal protection against influenza virus infection. Both TIV and LAIV are widely available in the United States. Although both types of vaccines are expected to be effective, the vaccines differ in several aspects.

Clusters/Outbreaks of Influenza-like Illness: One school closing has been reported for week 9 of current season; one school closing was reported last season. No outbreaks have been reported for week 9 of the current season; no outbreaks were reported last season.

Data Sources: Laboratory-confirmed cases are reported to DHSS through the passive communicable disease surveillance system. Suspected influenza clusters and outbreaks are reported through the active surveillance system. Pneumonia and influenza deaths are reported through the DHSS Bureau of Vital Records. Influenza-like illness data by age category and total number of patient visits by week are reported voluntarily by participants in the U.S. Influenza Sentinel Physicians Surveillance Network.
